

Carriage Rollers

Carriage Rollers - Carriage rollers are specifically designed bearings which are used on lift masts to be able to help them perform in tough environmental surroundings. Lift masts are normally subjected to oscillations, shocks, vibrations and high dynamic and static loads. This apparatus is frequently exposed to environmental influences such as heat, dust, cold, aggressive ambient air, moisture and contamination. Hence, the guidance arrangements of lift masts need to be specifically tough and have a particular high load carrying capability.

To help compete in many different environmental surroundings, carriage rollers were designed for many lift masts. While having the ability to deal with a specifically high load carrying capacity, these bearings provided an economical operational security for the lift masts' guidance arrangements.
