

## **Fork Positioner for Forklift**

Forklift Fork Positioner - A fork positioner is a device made out of top quality materials meant to withstand the most challenging operations and work environments. This particular piece of equipment enables drivers to operate the forks hydraulically without leaving the seat. Side shifting models have the extra ability to be able to laterally position the arms or the entire load in order to facilitate much more exact lifting and placement in a faster and more effective way.

The unique fork pocket design could enable operators to be able to safely sway the unit's forks without any fear of damaging the positioning cylinders. This could allow the worker the choice to either execute independent or simultaneous fork movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be converted into fork positioners on available units.
